- Fogel, Robert W., The Escape from Hunger and Premature Death, 1700-2010, Cambridge University Press, 2004

Class Meeting
Times: Tuesday and Friday – 2pm to 3:50pm

Classroom: School of Business Building 122

Course Description: The economic development of Europe is traced from the medieval period to modern times. Particular emphasis is given to the growth of economic institutions that preceded those of modern Europe. The growth of these institutions is further developed to demonstrate their influence on the United States.

Course Objectives:

The student will be able to:
A. Explain the major economic and social forces in the development of modern Europe.
B. Apply economic analysis to historical events.
C. Describe the nature and causes of economic growth.
D. Explain the historical context of the economic development of Europe.
E. Analyze the interaction between economic forces, historical events, and social and institutional change.
F. Understand the influence of European economic development on the economic development of the United States.
G. Write clearly and persuasively on issues related to the economic development of Europe.
Assessment: Methods include: A mid-term and a final examination, and a paper. The paper will require each student to analyze economic forces and their impact on a specific historical event (or set of historical events). It is strongly recommended that students seek help with the first draft of the paper (either from the school’s designated writing assistance program or from the instructor). Students with writing deficiencies are expected to take corrective steps.

Prior to each examination you will be given a list of questions from which five will be selected by the instructor. The examinations will be returned to the students in a timely fashion and each of the answers to the questions asked on the examinations will be explained in detail by means of a discussion between students and the instructor. The discussions of each of the answers will not only help you understand problems that they may have encountered in answering the examination questions but it will also provide the instructor with valuable feedback. Each of the examinations account for thirty-three percent of the final grade.

You will also be required to write a research paper that will account for thirty-four percent of your final grade in the course. Each student will have an opportunity to select a topic for the research paper. Each topic must first be approved by the instructor. Prior to the selection of a research topic, the instructor will provide the necessary guidelines for the content and structure of the research paper. The instructor will also show the kinds of research a student may engage in such as a) explaining an anomaly, b) extending an existing study backwards or forward in time, c) repeating a study done for one particular market or industry with data from another market or industry, d) examining older studies using new statistical or theoretical models, e) following up a published suggestion for future research, and f) surveying the literature on a particular issue or question.
